**FOR IMMEDIATE RELEASE**

## **Anuvia Plant Nutrients to Reopen Mosaic Plant City Facility as Second Florida Location**

*Zellwood-based Company creating more than 135 new jobs*

Zellwood, Fla. September 24, 2019 –Anuvia Plant Nutrients has entered into a long-term strategic relationship with The Mosaic Company to help meet the increased demand for its biobased sustainable and environmentally friendly plant nutrients.

The companies have signed a long-term lease arrangement which provides significant benefits to both parties and the surrounding community. Anuvia will utilize a portion of Mosaic’s shuttered Plant City phosphate production facility and repurpose existing infrastructure to increase its production capacity to up to 1.2 million tons. Currently, Anuvia’s Zellwood facility produces 80,000 tons annually.

In addition, as production increases, the company plans to add approximately 135 new employees with an average salary of \$70,000. It will be the Zellwood-based company’s second Florida location and is expected to be operational by second quarter 2020.

This expansion is in response to increased demand for Anuvia’s biobased sustainable and environmentally friendly plant nutrients. “In the three years since the Zellwood plant went online, the market has been receptive to our products and its unique benefits,” says Anuvia Plant Nutrients CEO Amy Yoder. “And now in response to the increased demand, we are increasing our production capacity. It is gratifying that farmers are realizing the performance and environmental benefits Anuvia products bring to crop production.”

“Mosaic has been looking to partner with successful, innovative companies and this arrangement which includes an equity position is an excellent fit for us,” says Walt Precourt, Mosaic Senior Vice President, Strategy and Growth. “Both companies are committed to operating safely and sustainably while providing customers with high quality crop nutrient solutions. We look forward to exploring opportunities to further expand our relationship.”

In agriculture, Anuvia products stand out because of their ability to help farmers increase productivity as well as the far-reaching environmental benefits which include improving soil quality, reducing nutrient loss and the reduction of greenhouse gas emissions.

Research and extensive use indicates a positive yield increase which allows farmers to produce more food in a less intensive manner. Anuvia's innovative products address a key issue of our time—how to meet future food demand in a sustainable way.

Their products offer benefits for both end-users and the planet with little to no barriers to implementation. Anuvia's plant nutrients products are a plug-and-play technology primed for fast adoption. Their products work within current user practices and technologies, making their use a turnkey part of achieving sustainable goals.

Anuvia's products include SymTRX™ for the agricultural sector, GreenTRX™ for the turf industry and ANUGREEN for the consumer residential lawn market.

###

### **About Anuvia Plant Nutrients**

Anuvia Plant Nutrients manufactures high-efficiency, sustainable bio-based fertilizers for the agriculture, turf and lawncare industries. Located in Zellwood, Fla., the company developed and uses a unique technology that not only optimizes nutrient availability and efficiency for plants, but also improves soil health, preserves natural resources and reduces greenhouse gas emissions. Anuvia is committed to offering easily-adoptable, profitable and sustainable solutions to customers, their communities and global agriculture. This commitment recently earned Anuvia an honorable mention in the food category of *Fast Company's* 2019 World Changing Ideas Award.
